AN UNUSUAL CALENDAR

In everyday life, we are usually unaware that at every location on the Earth's surface, small—yet systematic—forces act on us and on our surroundings. These forces change every hour and result from variations in gravitational acceleration. They are strong enough to cause even several-meter rises in ocean levels—the formation of tides. It is not known whether, or how, these forces affect living organisms and the environment.

It is commonly believed that the cause of local variations in Earth's gravity is the gravitational attraction exerted by the Moon and the Sun. There is also a

hypothesis that the source of gravitational changes lies in the Earth's inner core ("Unknown Earth - unknown hypotheses"). Whatever the cause, the effect in the form of variable gravity is recorded by gravimeters.

This calendar contains a forecast of increases in gravitational acceleration in 2026, calculated for the Southern Great Barrier Reef. The farther one moves away from this region, the greater the differences in the timing and magnitude of the calculated changes.

Living organisms are also, of course, influenced by the brightness of sunlight and, at night, by moonlight. In order to make it possible to observe correlations between various phenomena, these two quantities as well (their vertical components) are presented in the calendar.

All values are specified on an hourly basis and expressed as a percentage of the most significant changes observed on Earth.

January

1 ThursdayNew Year's Day

Time	Sunlight	Moonlight	Phase	Gravity	Notes
